CRAFTED
FOR COMMAND

A SEAT SHAPED AROUND YOUR PROJECT.

Every vessel has its own proportions, purpose and personality. Its seating should reflect all three.

SEATHRONES develops marine seating tailored to your space, intended use and brand identity. Form, dimensions and upholstery are considered together from the first moment.

A new design or an adapted starting point, shaped to belong on board.

IT BEGINS WITH A CONVERSATION.

Your vessel, your ideas, our shared attention to the details.

Tell us how the space will be used and what the seat should express. We explore proportions, construction and finishes with you, refining the design as the conversation develops.

Once the design and specification are agreed, we bring quantities, production planning and delivery coordination into the same conversation.

THE HUMAN TOUCH.

A seam guides the eye. A carefully finished edge changes the feel. Small decisions give the seat its character.

Cutting, sewing and finishing bring the design into its final form, with care for the details people see and touch.

MATERIALS

CHOSEN FOR QUALITY LIFE AT SEA.

Built on stainless steel frames, our seats offer exceptional structural strength, durability and corrosion resistance.

Moulded PUR foam delivers consistent support and lasting comfort, with UV and flame-retardant performance.

Upholstery and thread are selected around project requirements, including water exposure, UV and flame resistance where applicable.

Texture and colour are part of the design. Exposure, use and care are part of the brief.

PART OF THE VESSEL.

DISTINCTLY YOUR BRAND.

Proportion, colour and branded upholstery come together in a completed onboard installation.

DIFFERENT BOATS.
INDIVIDUAL IDENTITIES.

Tailored upholstery, embroidery and seat configurations in completed installations.

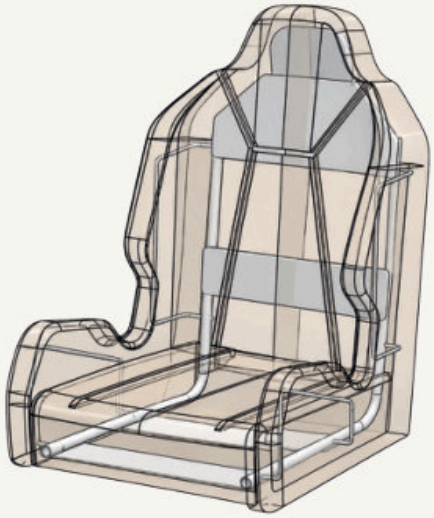

FROM FIRST SKETCH TO FINISHED SEAT.

01 CONCEPT DESIGN

The first line defines the direction.

Proportion, silhouette and posture begin with a sketch.

02 DESIGN ENGINEERING

The idea becomes a structure.

Digital design brings the form and its internal construction together.

03 FRAME CONSTRUCTION

Strength takes shape.

The frame forms the structural foundation beneath the surface.

One seat. One unified design. From the first sketch to the final upholstery, form, structure and comfort are developed together to suit your vessel.

04 MOULDED PUR FOAM

Comfort is built into the form.

Moulded polyurethane foam shapes the support around the frame.

05 UPHOLSTERY & FINISH

The design becomes a complete seat.

Tailored upholstery brings the surfaces, seams and final character together.

ENDLESS OPTIONS

A chance to have a unique seat,
just for your vessel.

BRING US YOUR VISION.

A sketch, a layout or a conversation about life on board. There is more than one way to begin.

Share the space and installation points, the character of your brand and the way the seating will be used.

Together, we can discuss the seat types, quantities and project milestones that will guide the design.

seathrones

A SHARED PASSION FOR LIFE AT SEA.

We care about the engineering beneath the surface, the craft in every seam, and the safety, durability and comfort of being on board.

Tell us about the vessel you are creating. We would be delighted to explore its seating with you.
